Programme Full Name	Bachelor of Science (Honours) in Integrated Environmental Management 綜合環境管理榮譽理學士
Programme Short Name	BSc(IEM)
Short Description	<p>Environmental management is of growing importance in the daily operation of private and public sectors. Throughout the past few decades, new environmental tools have emerged to enable policymakers and decision-makers to deal with environmental challenges presented in their planning and operation, including environmental accounting, environmental risk assessment and environmental management system certification. At the same time, the establishment of environmental regulation in different jurisdictions makes it necessary for different sectors to comply with different legal and regulatory requirements. This multidisciplinary programme is catered for students who have a strong interest and dedication in environmental management and sustainability</p> <p>The programme aims to provide students with a solid training in both scientific inquiry and social sciences inquiry so that they can understand the nature and complexity of the environmental challenges faced by the humanity. This also enables them to consider and tackle different environmental problems systematically using an evidence-based approach. Importantly, they will also be able to communicate their views and arguments on environmental issues to convince different stakeholders (including the general public and policy makers). Upon the completion of the programme, students will be able to apply professional knowledge to manage a broad range of environmental issues in the real world.</p> <p>The Internship in the final year of study provides students with real-life integrated environmental management experiences strongly linked to their future career. This allows students to apply, practise and integrate their knowledge and skills acquired in other courses of the programme in solving authentic environmental problems.</p>
